

## **Washington State Department of Labor and Industries**

### **Specifications for NPI Data Capture: ASC X12N 837 (4010A1)**

---

L&I will be implementing system and business process changes to utilize the National Provider Identifier (NPI). This change is to accommodate any Workers Compensation healthcare providers using an NPI. Providers may continue using their L&I account numbers, even after the national compliance date of May 23, 2007. However, providers with an NPI(s) may find administrative benefits to using it for all payers, including billing for medical services provided to injured workers.

#### **Purpose**

The agency's preliminary phase of implementation begins July 2006. Providers and clearinghouses are encouraged to submit the National Provider Identifier (NPI) in addition to the L&I provider account number in the 837 X12N 4010A1 transactions. The purpose of including the NPI is to build a cross-reference between the NPI and the L&I provider account. This cross-reference will be utilized following the agency's full implementation, currently scheduled for March 2007.

During the preliminary phase the agency continues to require the submission of the L&I provider account number within the 837 X12N 4010A1 transactions. Omission of this field will result in denied transactions. The NPI will NOT be used to adjudicate or process transactions and will not be returned in the 277 unsolicited acknowledgements/pended notices, or in the 835 remittance advice in this phase.

The agency's full NPI implementation will allow providers to submit their 837 transactions with their NPI, and not require submission of the L&I provider account number. Their 277 acknowledgement/pended notice, and 835 remittance advice will include their corresponding NPI with final implementation.

#### **NPI Data Capture Specifications**

The following specifications define the 837 X12N 4010A1 elements and L&I requirements for the NPI Data Capture phase. These specifications ONLY address the elements related to provider identification within the transactions. Refer to the current Washington State ASC X12N 837 (4010A1) Companion Guide, Version 2.0 for all other billing data requirements. A complete revision to the Companion Guide (version 3.0) will be published to reflect these changes and any additional optional values upon full implementation of NPI.

Providing all the elements specified will help to ensure a more complete and accurate cross-reference between providers' L&I account number(s) and their NPI(s). Please note: the L&I number continues to be required in the REF segment for all applicable loops. The main change is that the NPI is now the primary identifier in all loops, and the tax identification is moved to an additional secondary identifier REF segment. Include the provider's taxonomy code for their specialty wherever possible. Include all relevant address information. Include rendering provider address information in the Service Facility loop, if the address is different than in the billing/pay-to loop.

#### **Testing**

No testing will be required during the data capture phase. Providers and clearinghouses submitting their transactions through the Provider Express Billing (PEB) web site will be required to perform full-loop testing (billing transactions – remittance advice) once NPI is fully implemented in the L&I systems in March 2007. The e-billing support unit will coordinate your transition testing and validation. There should be no disruption to revenue continuity during testing as providers will continue to include their L&I provider account number until successful testing is complete.

Please continue to check the L&I web site for additional information and the transition schedule, regarding implementation of the National Provider Identifier.
